New WEBSITE for a 60-Year-Old Company

I am proud to announce the launch of a website that's nearly as impressive as our company's reputation!

When founders Al Crombie and Gene Garoutte were crawling around HVAC systems in 1958, developing the radical idea that designs had gotten so complex that engineers were needed “in the trenches” to balance them, the word “website” would have been just a warning to avoid arachnids. They wouldn't have foreseen their company image (and their own photos) spread electronically, all around the world.

Nor would they have foreseen the way NorthWest Engineering Service, Inc. would grow to offer such varied services across multiple industries. Our new website not only identifies these more clearly, it reinforces the fact that every person in our employee-owned company is vital to our mission: to make buildings better for occupants, owners, facilities teams, and the environment.

We've added more projects to showcase the type of

In addition to featuring employees more prominently, the new website includes ties to outside organizations that highlight the roles that new technologies, changing regulations, and professional credentials have in ensuring our clients get what they pay for the first time, every time. It also includes links to organizations we support, to foster stewardship in our communities.

work we do, including those reflecting the expansion of our footprint throughout the Pacific and Inland Northwest since opening new offices over the past several years. Of course, we'll continue to feature some of our more interesting projects in our quarterly newsletters, like CHH-South.

Expansion on OHSU's South Waterfront Continues

Architectural Renderings: ZGF Architects

Oregon Health & Science University continues its expansion on Portland's South Waterfront with two new multi-story buildings that make up the CHH-S project.

David Cunningham, PE
Commissioning Services Division Manager
CHHS Project Manager

As our project manager and lead commissioning authority for the Center for Health and Healing South project I am very excited to be a part of the integrated team that is bringing these two beautiful buildings to reality. Having been a member of OHSU's team since mid-2015 it has been both educational and challenging finding how our commissioning work fits with the rest of the project team's disciplines and members.

Hoffman Construction's lead and expertise as the primary trade partner on the project has been critical through multiple rounds of design revisions to ensure the buildings meet both OHSU's needs and budget.

The facilities being built will provide comfortable locations where families can stay for longer periods of time while their children receive care for life threatening illnesses.

Although relatively standard mechanical, electrical, and plumbing systems are being used, the buildings currently have enough points for LEED certification and are on track to certify Gold while still pursuing a path to Platinum.

In addition, the CHH-S is participating in Portland General Electric's Dispatchable Standby Generation program. Doing so helps reduce the cost to OHSU for standby power generators necessary for such a facility, while giving the utility an additional source of power during shortages. Fortunately our electrical commissioning team member from Akana, Nitu Iyer is up to the challenge and has been working with ON Electric Group to ensure everything works like it should.

The buildings are entering the later stages of construction. The completion is scheduled for late this year with occupancy occurring in the first part of 2019. Once again, it is exciting to be part of such a dynamic team working on such a high profile project for OHSU.
