

MOBILIZING COMMUNITIES
IN CREATING A FUTURE OF
LIMITLESS POSSIBILITIES

The moment kids get to school, people put them in a box. Their future is being written without their say-so. And if their skin is brown, or their clothes are different, or their mom has an unusual accent, then chances are they'll start thinking math and science aren't for them – that a future isn't for them. So they leave school, unfinished, and without a plan for the future. In4All is out to change that narrative.

CHANGING STUDENT MINDSETS

Research shows that students who are historically underserved find it hard to connect classroom lessons to future success. It has little to do with their abilities and a lot to do with the fact that students are overwhelmed navigating systemic barriers in our society, from poverty to racism and other burdens affecting their community.

In4All is focused on changing a narrative that tells these students they don't belong, or they can't succeed, or that school doesn't matter. We are mobilizing industry and education to show that student success is a shared responsibility in our communities – and that it all starts with impacting the mindset of our youth.

“That failing forward thing – I don't think that is just about math. I think that's about real life.”

– 8th grade student

ENGAGING K-12 STUDENTS

In4All programs bring educators and business professionals together to create learning experiences that impact students at critical times in their K-12 education. All our programs are informed by research, tied to educational standards, and measured through formal evaluation to ensure we are making a difference for students who have been historically underserved in Oregon.

Elementary school

The STEM Connect 4/5 program partners a sponsoring business with a local elementary school to deliver hands-on learning experiences. Last year, our partnership impacted thousands of fourth and fifth graders increasing their interest in STEM-related fields and opening up a world of possibilities for them.

Middle school

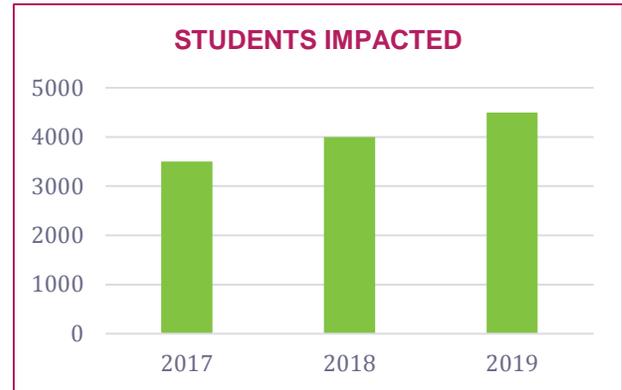

Our new middle school program is designed to increase interest in math and science before students enter high school where they are at risk of dropping out of the education system entirely. The unique program connects lessons to places in their community making it highly relevant to the students and maximizing their engagement in the process.

High school

Our high school program has provided hundreds of students work-based learning opportunities in real-world settings – and we are looking to expand those opportunities in the years ahead. We are now forming a student advisory committee that will inform program development and help us take the final step in completing our engagement model for the K-12 experience.

OUR IMPACT

In4All programs impacted 4,000 elementary and middle school students in the 2017-2018 school year and we are poised to exceed that number in 2019. We made that impact thanks to 26 business-school partnerships that brought 400 volunteers into the classroom – twice as many as the previous year.
