

## OREGON

[Portland Bureau of Planning and Sustainability](#): Planned development bonuses for energy efficient buildings.

Our firm is able to assist with proving your facility meets the standards you're pursuing whether that's Energy Trust of Oregon's Path to Net Zero, or LEED certification. Our Professional Engineers have the capacity and experience to troubleshoot and verify what your facility needs to qualify for the chosen program.

[Multnomah County PropertyFit](#). CPACE is financing for improved building performance.

This program offers benefits assessment to aid building owners in repaying the cost of improvements. NWESI can assist this goal by conducting retro-commissioning or energy assessments. Both of these services give you actionable corrections and observations for improved energy use and savings.

## WASHINGTON

Washington boasts a variety of programs tied directly to energy and utility companies for increased energy savings, or for renewable energy. Because the state requires commercial building energy use disclosure, there are many programs invested in meeting energy goals.\* Among these, Washington State University has developed resources for homes and businesses, and has encouraged an energy efficient space, from using Total System Performance Ratio ([TSPR](#)) compliance path to others.

For a list of area specific programs detailing financial incentive information, visit [DSIRE Programs](#).

## IDAHO

Idaho is working toward more sustainable and energy efficient buildings, but doesn't currently have energy targets in place. However, there are a still ways to bring efficiency to your building and gain rebates or other cost savings. One such program is the Idaho Power Custom Projects incentives for commercial and industrial clients for new or existing buildings. Read more [here](#).

## FEDERAL

Commercial buildings are eligible for tax incentives up to \$1.80 per square foot when it meets savings goals or ASHRAE Standard 90.1. Please review these governmental [resources](#) for more in-depth information to see if your facility is eligible.

Our energy management and commissioning professionals are well-versed in the areas of facilities that are often underperforming, or are no longer functioning correctly. Whether your facility has leaks in the building envelope, underperforming HVAC systems, or has drifted into off-conditions, we can assess and diagnose what it needs to meet energy incentive requirements.
