

FIRE SMOKE DAMPER TESTING

Fire Smoke Dampers (FSD) are essential components in a building's fire protection and life safety systems. According to NFPA code, regular testing and maintenance is required to ensure dampers are functioning properly and in compliance.

Our services include:

-  Inspection and testing of every damper
-  Using building HVAC system drawings to document all damper locations
-  Comprehensive report detailing access requirements for dampers
-  Field labeling, for simplicity of locating dampers, and streamlining repairs
-  Providing a separate deficiency list
-  Documentation verifying equipment is functioning properly
-  Limited to no disruption to occupants

Professional Expertise

NWESI's substantial background in Commissioning (Cx) and Testing, Adjusting, and Balancing (TAB) has put us in a unique position to execute audit surveys of HVAC systems, identify and functionally test all Fire Smoke Dampers, and provide necessary documentation to meet AHJ requirements.
